At least 4 weeks

**Booster**

- At least 8 weeks

**Booster dose for ages 6 months - 11 years not currently recommended**

- Ages 12 - 17: Pfizer-BioNTech bivalent vaccine should be used for the booster dose

**BIVALENT**

- Ages 18 & older: Dose: 0.5 mL
Novavax
Protein Subunit Vaccine

Immunization Schedule for Ages 12 and Older

Primary Series: Monovalent

Dose 1
- Dose: 0.5 mL
- At least 3-8 weeks

Dose 2
- Dose: 0.5 mL

Booster

Dose 3
- Ages 12 - 17
  - Pfizer-BioNTech bivalent vaccine should be used for the booster dose
- Ages 18 & Up
  - Moderna or Pfizer-BioNTech bivalent vaccine should be used for the booster dose

Immunization Schedule for Those Over Age 12 Who Are Moderately or Severely Immunocompromised

Primary Series: Monovalent

Dose 1
- Dose: 0.5 mL
- At least 3 weeks

Dose 2
- Dose: 0.5 mL

Booster

Dose 3
- Ages 12 - 17
  - Pfizer-BioNTech bivalent vaccine should be used for the booster dose
- Ages 18 & Up
  - Moderna or Pfizer-BioNTech bivalent vaccine should be used for the booster dose

Guidance and Other Considerations per CDC's Interim COVID-19 Immunization Schedule for Persons 6 Months of Age and Older

- Administer the appropriate vaccine product based on the recipient's age and the product's age indications.
- Monovalent vaccine should be used for primary series doses. COVID-19 vaccine is a 2- or 3-dose primary series, depending on the recipient's age, immune state and the product used.
- For persons 12 years of age and older, administer a booster dose of bivalent vaccine after the primary series, regardless of the number of previous monovalent booster doses.
- COVID-19 vaccines may be administered on the same day as other vaccines, including influenza vaccine.
- The primary series should be completed with same product. If the vaccine product previously administered cannot be determined, is no longer available or contraindicated, any age-appropriate monovalent COVID-19 vaccine may be administered at least 28 days after the first dose to complete the primary series. Moderna or Pfizer-BioNTech bivalent COVID-19 vaccine can be administered for the booster dose, regardless of the primary series product.
- Persons with a recent SARS-CoV-2 infection may consider delaying a primary series or booster dose by 3 months from symptom onset or positive test (if infection was asymptomatic).
**Janssen (Johnson & Johnson)**

Adenovirus Vector Vaccine

Janssen COVID-19 vaccine is authorized for use in certain limited situations due to safety considerations*

---

**Immunization Schedule for Ages 18 and Older**

- **Primary Series: Monovalent**
  - Dose 1: Dose: 0.5 mL
  - At least 2 months

- **Booster**
  - Dose 2: Bivalent mRNA booster is recommended

---

**Immunization Schedule for Those Over Age 18 Who Are Moderately or Severely Immunocompromised**

- **Primary Series: Monovalent**
  - Dose 1: Dose: 0.5 mL
  - At least 4 weeks

- **Dose 2**
  - Additional dose of mRNA monovalent vaccine is recommended

- **Dose 3**
  - At least 2 months
  - Bivalent mRNA booster is recommended

---

*COVID-19 vaccine recipients should be informed that Moderna, Novavax, and Pfizer-BioNTech COVID-19 vaccines are recommended over Janssen COVID-19 Vaccine. The CDC recommends the Janssen/Johnson & Johnson COVID-19 vaccine should only be used in limited situations.
